MICROSERVICES – IN DEPTH

Expert Connect Session

Speaker

Chandra Mouli

Solution Architect

AGENDA

- Recap
 - Overview of Microservices Architecture & Challenges
 - Microservices Patterns
- Microservices main characteristics
- Service infrastructure principles
- Q&A
- Think out of the box

WHO AM I?

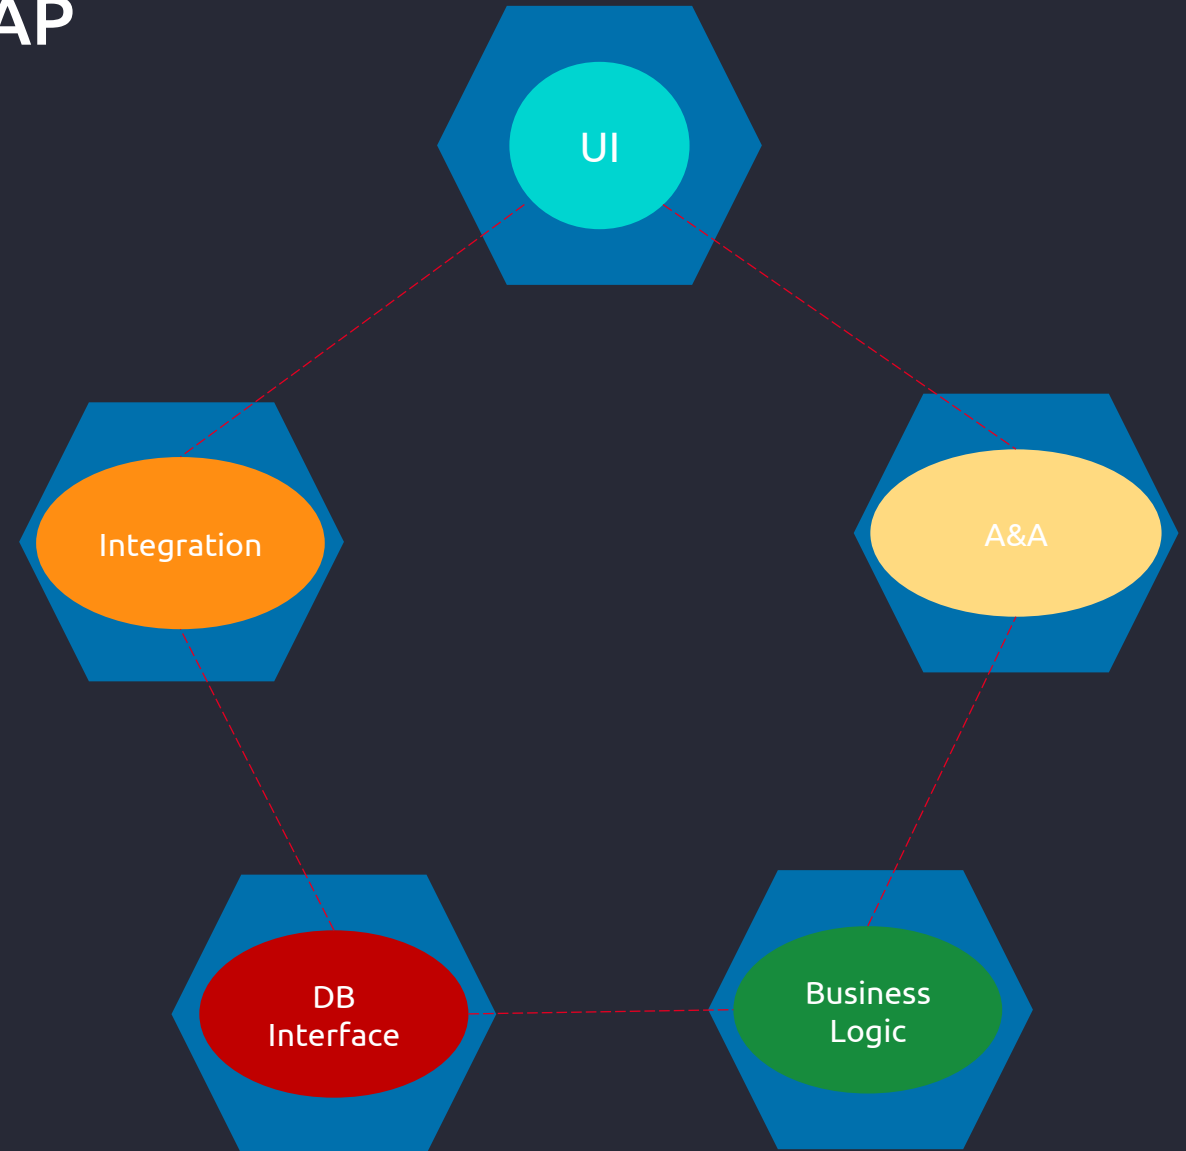

- 20+ years of IT Experience
- Role - Solution Architect
- Expertise in
 - System Design
 - Java & J2EE Development
 - Cloud
 - Integration

OVERVIEW OF MICROSERVICES - RECAP

- What is Microservice Architecture?
- When should we choose microservice architecture?
- Challenges in Microservices

MICROSERVICES MAIN CHARACTERISTICS

A 'good' microservice have 7 main characteristics

1. Fine-grained capabilities that are stateless *Eg:A&A*
2. Well defined interfaces which 'hide' how the service is executed. *Eg: Forex rate & Collect payment from different bank*
3. A 'very loosely-coupled' approach (can change one service without impacting another)
4. Autonomous, explicitly versioned & completely independent
5. stupid – “do one thing, and do it well”
6. cost and value fully defined
7. Disposable

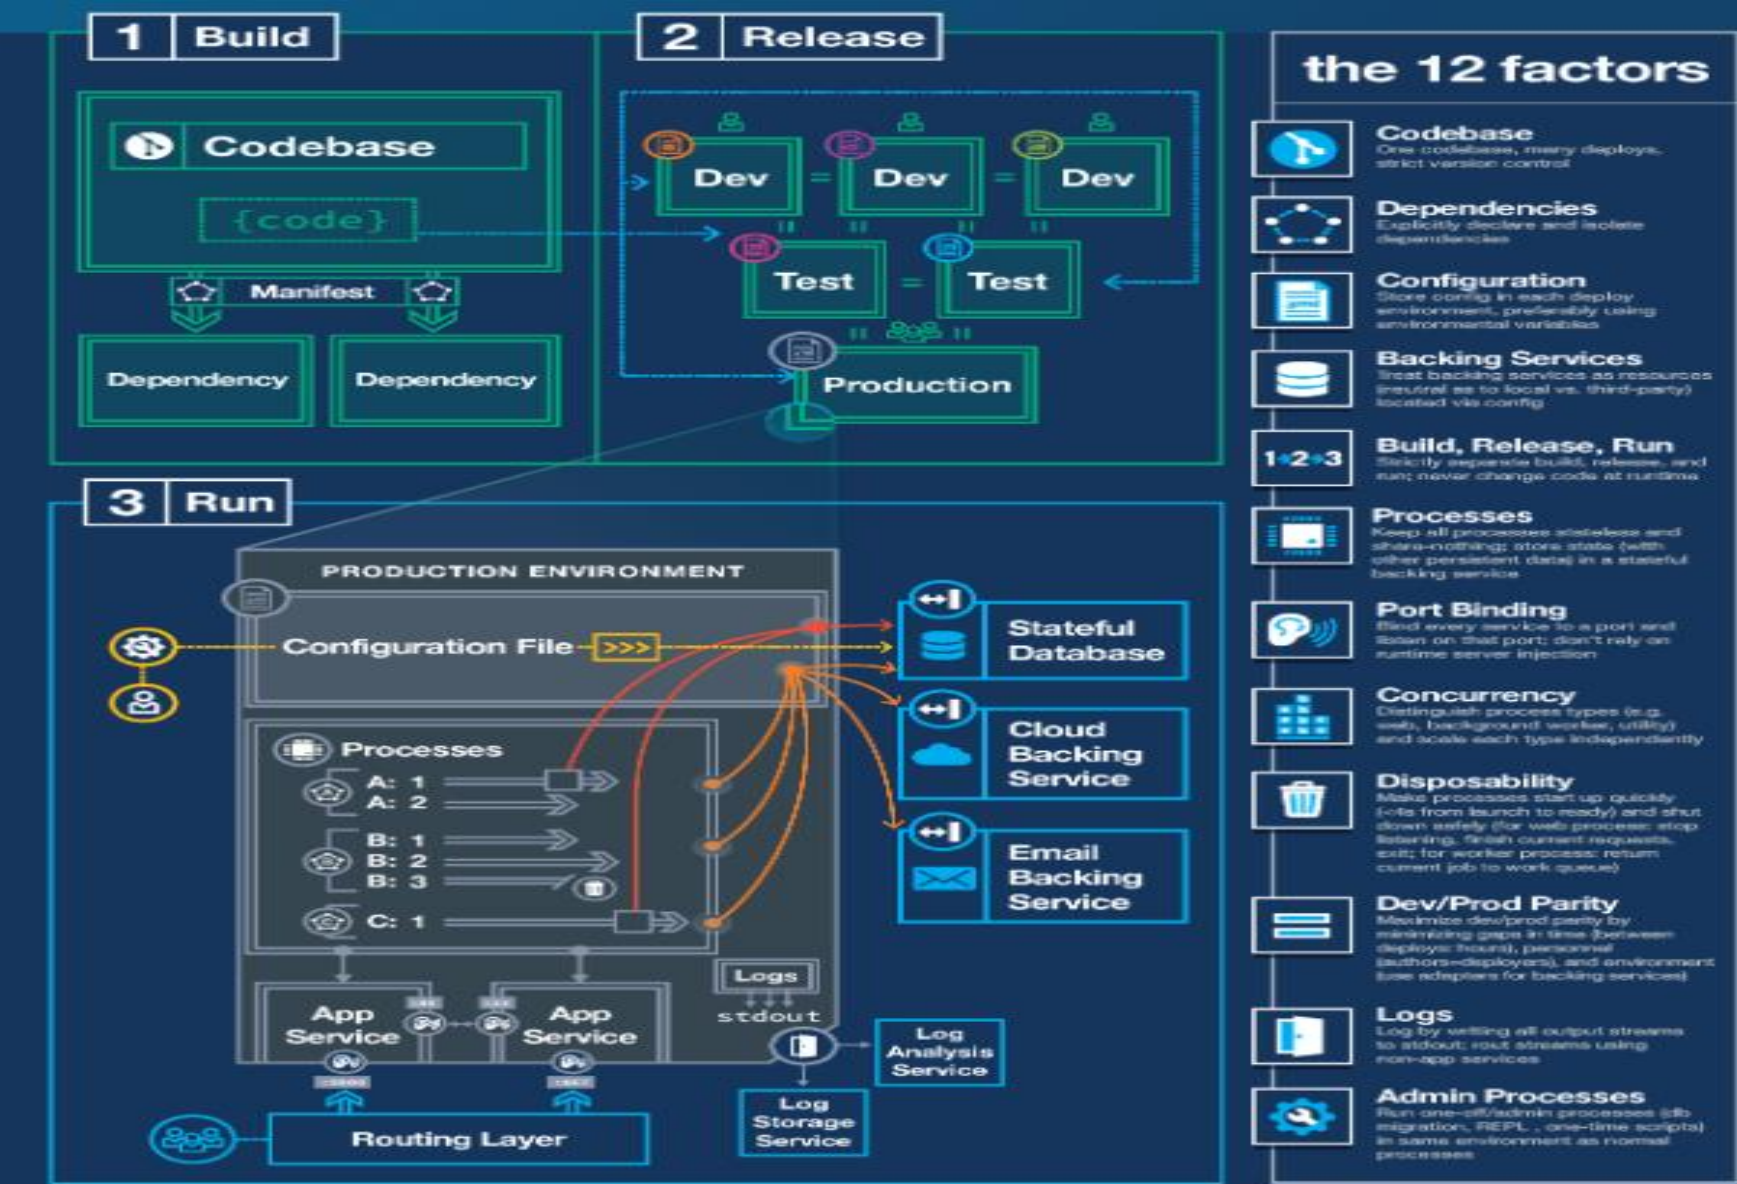

SERVICE INFRASTRUCTURE PRINCIPLES

A 'good' microservice have 7 main characteristics

1. Utility based
2. Open standards based
3. Multi-Tenant support
4. Technology independent & virtualized
5. Service oriented
6. Scalable
7. Fit-for-purpose
8. Sustainable
9. Automated
10. Modularity

API Gateway Features

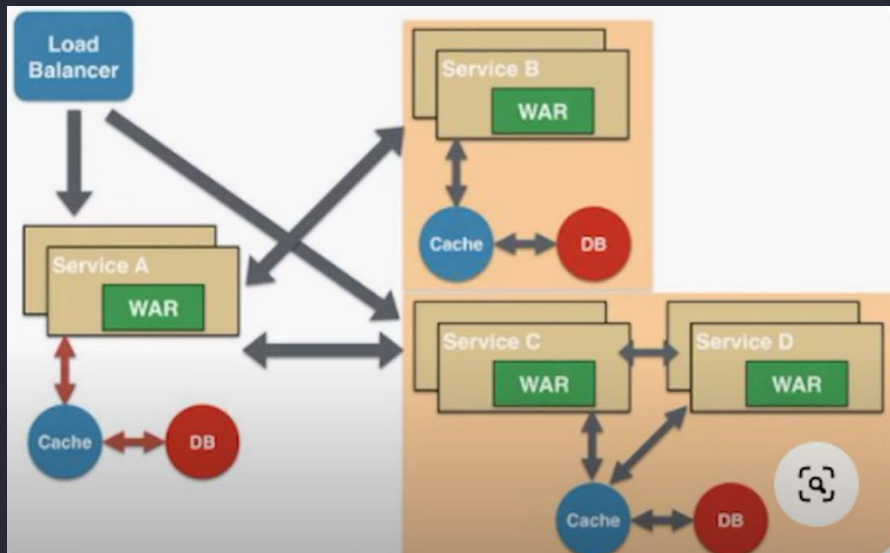

- Authentication and authorisation
- Service discovery integration
- Response caching
- SSL Termination
- Retry policies, circuit breaker, and Quality-of-Service
- Rate limiting and throttling
- Logging, tracing, correlation
- Headers, query strings, and claims transformation

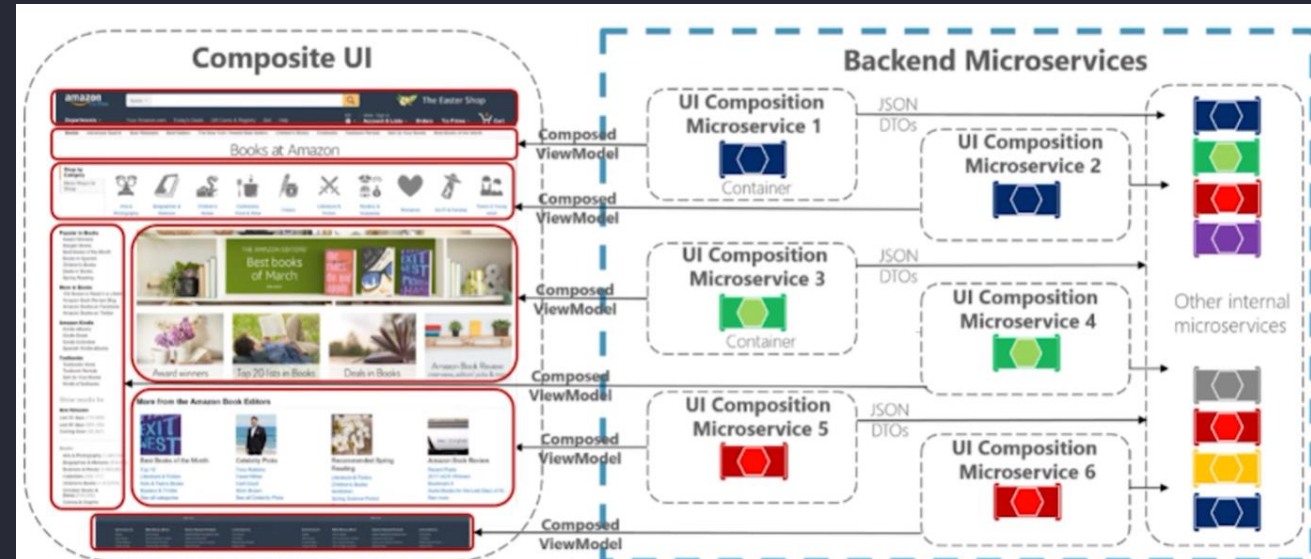

Aggregator Pattern

Gateway routing Pattern

Branch Pattern

Client-side UI Composition Pattern

SOME MORE DESIGN PATTERNS

Blue/Green deployment

Dark Launching

Canary Deployment

A/B Testing

CHALLENGES

1. Logging.
2. Monitoring.
3. Service impact (Caused By One Service, Can Cause Trouble Elsewhere)
4. Version management & Cyclic dependency
5. Container Security
- .. more

Q & A

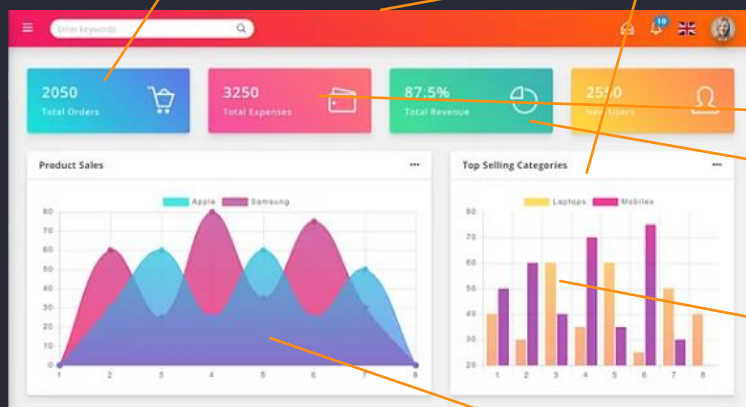

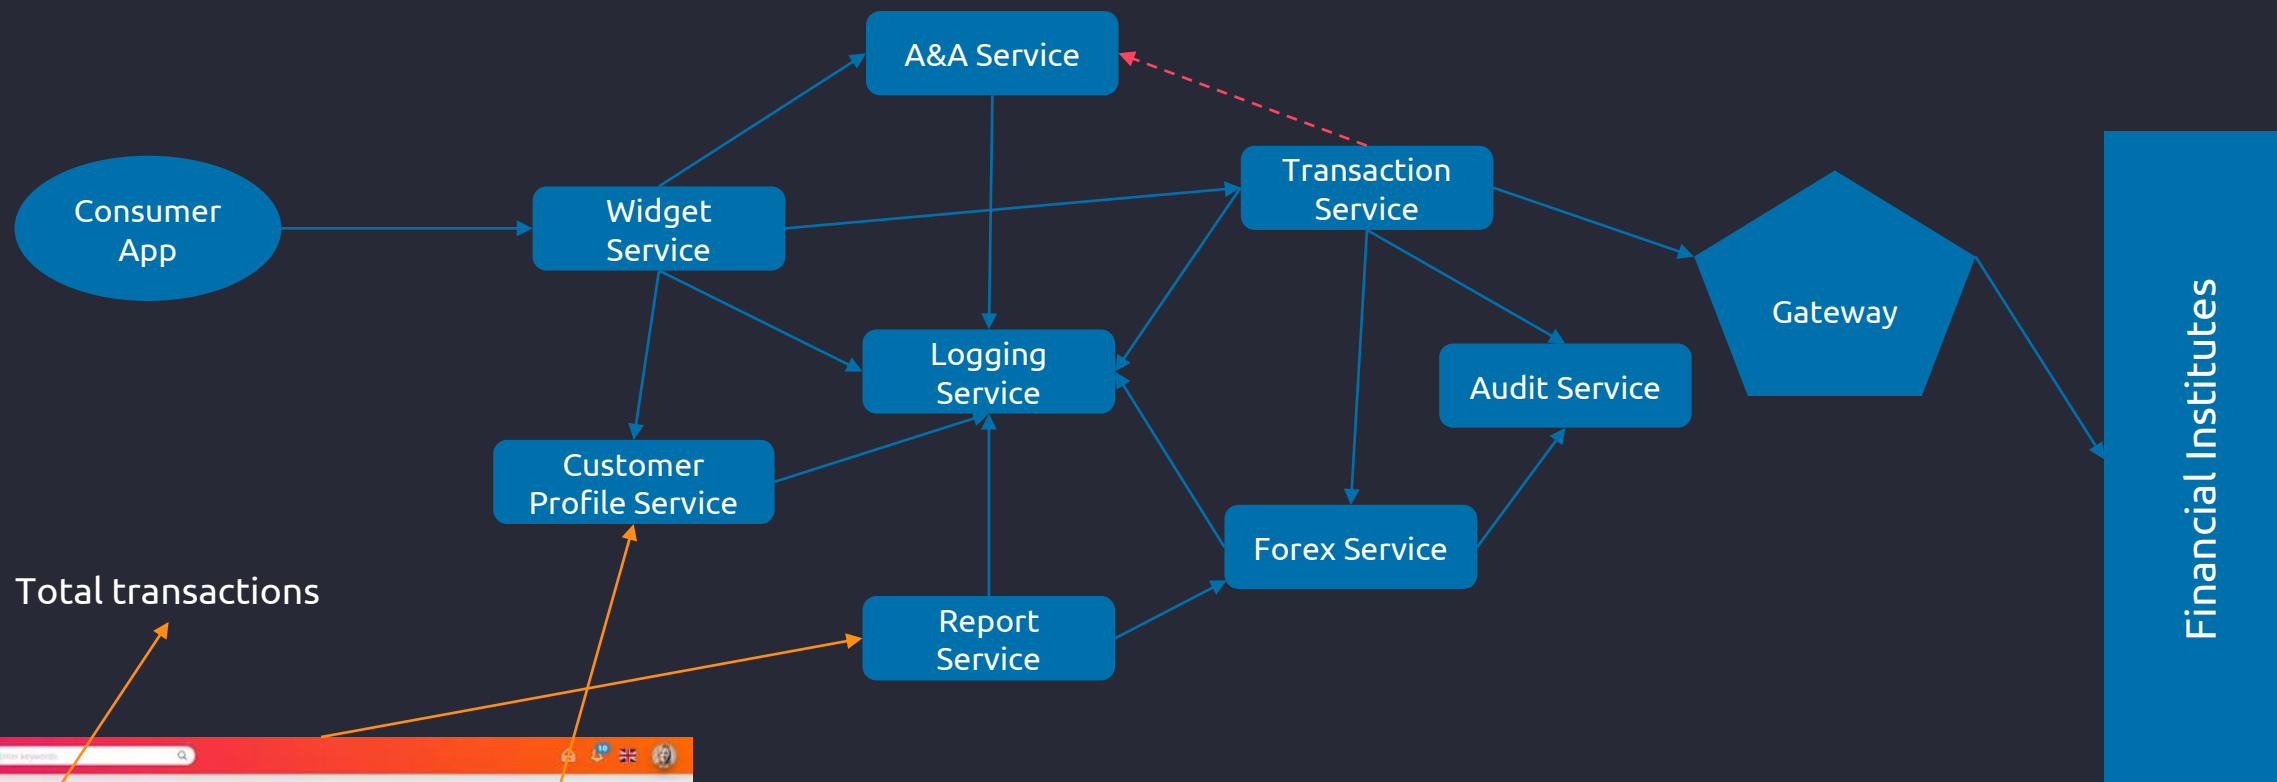

THINK OUT OF THE BOX

- Microservices based framework to provide basic CRUD operation (Plug and Play)

THINK OUT OF THE BOX

What all design patterns implemented in Simple Payment processing with Audit tracing and widget style implementation?
